

## eircom metro Ethernet

Reduce bottlenecks and extend your LAN with high-speed networking for your metro sites

**Connect all your city locations together with eircom metro Ethernet, delivering LAN speeds of up to 1 gigabit per second. See how eircom's metropolitan area networks can improve the efficiency, cost-effectiveness and simplicity of communications across your sites.**

### Seize the benefits of eircom metro Ethernet

- Enjoy a scalable high-bandwidth infrastructure optimised for data
- An excellent way of solving your LAN bottlenecks in metropolitan areas
- A cost-effective, no-fuss solution to link city offices at gigabit speeds
- Uses the established Ethernet standard
- Simple, direct connectivity to the eircom Business IP network and Internet services
- Rapid, on demand scalability: we can quickly and easily provision new VLANs for you or adjust your bandwidth, as your needs change

### eircom metro Ethernet makes it easy to get closer

To stay competitive today, your information must move faster than ever. Whether you're looking to share resources between offices or ensure fast back-up or restoration of your information, eircom metro Ethernet can help. It extends your LAN right across the metropolitan area to your other sites nearby. Available across Dublin and Cork City, eircom metro Ethernet offers LAN speeds of up to 1Gbps, and helps advance your plans for closer collaboration among your dispersed teams.

### Fast, secure setup, with service classes to suit you

Getting started with metro Ethernet is easy, since it uses the Ethernet standard already on your LAN. Three service classes let you choose what's best for your needs:

- **Standard Class:** ideal for low-priority or delay-tolerant applications, this standard delivers traffic on a best-effort basis
- **Premium Class:** the best choice for critical and time-sensitive applications
- **Flex-Class:** access Premium and Standard bandwidths via a single convenient port. The intelligent switch recognises and routes marked traffic to the appropriate service class, giving you excellent flexibility in how you use your bandwidth.

## **eircom metro Ethernet at a glance**

### **How does it work?**

eircom metro Ethernet is a LAN extension tool that allows you bring your other city locations into your local area network, by linking to them over eircom's purpose-built, native Ethernet network

### **Connectivity**

Provides connectivity among locations in the Dublin Metro area and in Cork City.

### **Speed**

eircom metro Ethernet is available at speeds of up to 1Gbps

### **Set-up**

eircom installs a Metro Ethernet switch on your premises. This plugs into a router or switch which can be provided by you or eircom. Once established, the network is managed by our specialists end to end, freeing your in-house team from tasks like provisioning and dimensioning.

### **Robust security**

Each 'VLAN' we set up for you has complete traffic separation, for total business assurance.

## **Speedy setup for smooth implementation**

Once you choose eircom metro Ethernet, we work hard to ensure speedy implementation under the direction of your dedicated project manager. After set-up, we don't need to call out to your premises to adjust bandwidth - changes can be made remotely, ensuring fast service for you.

## **Extend your network with onward connectivity**

Use eircom metro Ethernet to extend your network with optional connectivity to onward services including eircom Business IP, or the Internet.

**Find out why so many companies are turning to eircom metro Ethernet as their choice for metro areas. For more information please contact your eircom Account Manager.**
